Description¹

Blepharoplasty and blepharoptosis eyelid repair are reconstructive plastic surgery procedures of the eyelids. Surgery of the upper eyelids is reconstructive when it provides functional vision or visual field benefits or improves the functioning of a malformed or degenerated body member. The goal of reconstructive surgery is to restore function to the eye structure.

Policy/Criteria¹

- I. WellCare of North Carolina[®] shall cover blepharoplasty and blepharoptosis eyelid repair when the member meets the following specific criteria:
 - A. Ptosis obstructs vision to less than 30 degrees on the vertical meridian, **OR**
 - B. The member has exposure keratitis.
 - C. As applicable, the following documentation is required:
 1. Medical documentation that the eyelid ptosis obstructs vision including visual field examination results, unless the member is unable to test, **OR**
 2. Medical documentation that the member has exposure keratitis of the lower eyelid, **OR**
 3. Medical documentation to substantiate medical necessity for surgery including the following:
 - a. Member complaints of interference with vision or visual fields, difficulty reading due to eyelid drooping, looking through eyelashes, **OR** seeing upper eyelid skin.
 - b. Relevant medical history,
 - c. Physical examination findings; **AND**
 - d. Results of pertinent diagnostic tests or procedures.
- II. It is the policy of WellCare of North Carolina[®] shall **not cover** blepharoplasty and blepharoptosis eyelid repair when the medical criteria listed in Criteria I, above is not met.
- III. WellCare of North Carolina[®] Medicaid shall not cover blepharoplasty and blepharoptosis eyelid repair performed solely for cosmetic reasons to enhance aesthetic appearance.

Blepharoplasty and Blepharoptosis (Eyelid Repair)

Background¹

A. *Blepharoplasty*

Blepharoplasty is the plastic repair of the eyelid in which redundant skin, muscle, or fat are excised. Functional blepharoplasty involves the excision of skin and orbicularis muscle. This procedure is performed to correct a deficit in the upper or peripheral field of vision or as noted on forward gaze by skin resting on the upper eyelashes.

B. *Blepharoptosis*

Blepharoptosis is drooping of the upper eyelid caused by a weakness of the muscles. The condition is congenital or acquired and can cause significant functional visual impairment. Blepharoptosis repair is performed to repair dysfunctioning eyelid muscles (e.g., levator or Muller's) in order to correct visual field deficit.

North Carolina Guidance

Eligibility Requirements

- a. An eligible beneficiary shall be enrolled in the NC Medicaid Program (Medicaid is NC Medicaid program, unless context clearly indicates otherwise);
- b. Provider(s) shall verify each Medicaid beneficiary’s eligibility each time a service is rendered.
- c. The Medicaid beneficiary may have service restrictions due to their eligibility category that would make them ineligible for this service.

EPSDT Special Provision: Exception to Policy Limitations for a Medicaid Beneficiary under 21 Years of Age

- a. 42 U.S.C. § 1396d(r) [1905(r) of the Social Security Act]
Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) is a federal Medicaid requirement that requires the state Medicaid agency to cover services, products, or procedures for Medicaid beneficiary under 21 years of age if the service is medically necessary health care to correct or ameliorate a defect, physical or mental illness, or a condition [health problem] identified through a screening examination (includes any evaluation by a physician or other licensed practitioner).

This means EPSDT covers most of the medical or remedial care a child needs to improve or maintain his or her health in the best condition possible, compensate for a health problem, prevent it from worsening, or prevent the development of additional health problems.

Medically necessary services will be provided in the most economic mode, as long as the treatment made available is similarly efficacious to the service requested by the beneficiary’s physician, therapist, or other licensed practitioner; the determination process does not delay the delivery of the needed service; and the determination does not limit the beneficiary’s right to a free choice of providers.

Blepharoplasty and Blepharoptosis (Eyelid Repair)

EPSDT does not require the state Medicaid agency to provide any service, product or procedure:

1. that is unsafe, ineffective, or experimental or investigational.
2. that is not medical in nature or not generally recognized as an accepted method of medical practice or treatment.

Service limitations on scope, amount, duration, frequency, location of service, and other specific criteria described in clinical coverage policies may be exceeded or may not apply as long as the provider's documentation shows that the requested service is medically necessary "to correct or ameliorate a defect, physical or mental illness, or a condition" [health problem]; that is, provider documentation shows how the service, product, or procedure meets all EPSDT criteria, including to correct or improve or maintain the beneficiary's health in the best condition possible, compensate for a health problem, prevent it from worsening, or prevent the development of additional health problems.

EPSDT and Prior Approval Requirements

1. If the service, product, or procedure requires prior approval, the fact that the beneficiary is under 21 years of age does NOT eliminate the requirement for prior approval.
2. **IMPORTANT ADDITIONAL INFORMATION** about EPSDT and prior approval is found in the *NCTracks Provider Claims and Billing Assistance Guide*, and on the EPSDT provider page. The Web addresses are specified below:
